

12-36x50mm Mini Zoom - #52232

Congratulations on your purchase of a Celestron spotting scope! Whether your interest lies in nature or sports this spotting scope offers the finest in optical quality guaranteed to give you years of viewing pleasure.

Removing the Lens Cap

To protect the objective lens from scratches and dust, the spotting scope has a lens cap over the front of the tube. Once the lens cap is removed the lens shade can be extended forward to prevent unwanted glare. The lens cap simply press fits onto the front of the spotting scope and can be removed by gently pulling it forward.

Attaching the Spotting Scope to the Tripod

Your spotting scope comes with a table top tripod to support it for more stable viewing. To set up the tripod:

- Fan out each tripod leg 120° apart until they come to a stop.
- Place the spotting scope on top of the mounting platform and thread the tripod mounting screw into the hole in the bottom of the tube.

Focusing

Turn the focusing knob until the image is sharp. If the knob will not turn, the focuser has reached the end of its travel on the focusing mechanism. Turn the knob in the opposite direction until the image is sharp. Once an image is in focus, turn the knob counterclockwise to focus on a closer object and clockwise for a more distant object.

Never look directly at the Sun with the naked eye or with your spotting scope. Permanent and irreversible eye damage may result.
